BadgeR+ 5

Wearable Duress for Frontline Staff

Designed to be worn discreetly behind a standard ID badge, the BadgeR+ 5 allows staff to quickly request assistance, share critical incident insights, trigger vital incident response protocols, and alert the right responders—all without reaching for a phone or radio.

Key Features

Custom Alerts

Configure single, double or press-and-hold activations for different incident types and responses.

Haptic Feedback

A discreet vibration confirms the alert was successfully sent without drawing unnecessary attention.

Precise Location

When activated, BadgeR+ 5 helps responders identify the user's location down to the floor and room level.

Coordinated Response

Trigger deployment of responders, mass notifications, lockdowns and more—all from a single alert.

Live Incident Streaming

Stream ambient audio or location data for up to 10 minutes post-activation, giving responders ongoing context.

Privacy First

Location and audio streaming activate only when an alert is triggered—not during everyday use.

Tailored to Your Environment

BadgeR+ 5 lets staff request help throughout your facility, while security teams can tailor their response to different needs.

Ideal for:

- ✓ Facility staff needing protection without added bulk
- ✓ Teams needing multiple alert types from one device
- ✓ Organizations looking to automate incident response
- ✓ Organizations addressing panic-button mandates

Customize Your Incident Response Workflow

1. Duress Activation

Map single-, double- or press-and-hold activation gestures to different incident types and response needs.

2. Incident Response

Define who is notified, when, where and with what message based on incident type and activation location.

3. Responder Context

Enrich the dispatcher view with facility maps, security camera feeds and other incident context.

Mandated Drills Made Easier

Use test and drill modes to simulate real alerts, verify response workflows and help staff understand what to expect—without notifying unintended stakeholders or triggering a 911 response.
